

10th International Carbon Dioxide Conference

21 - 25 August 2017, Interlaken
Second Announcement

The Swiss science community and the Oeschger Centre for Climate Change Research are proud to organize the 10th anniversary International Carbon Dioxide Conference (ICDC10). The first conference of this series took place in Bern, Switzerland, and we now bring the conference back to the Bern area.

CONFERENCE WEBSITE

The official conference website (www.icdc10.ch) is now online:

It includes information about

- the scientific program and objectives
- the venue
- the conference special issue
- steering committees and supporting institutions

SCOPE OF THE CONFERENCE

ICDC10 will provide participants with an integrated, interdisciplinary view of the global carbon cycle and its perturbation by humans. Conference themes include the contemporary carbon cycle, its trends, variability and observations; the paleo perspective and planetary boundaries; biogeochemical processes and their feedbacks and linkages with ecosystems, climate and socio-economic processes; scenarios for the future and steps toward long-term Earth system stability, as well as carbon cycle research in support of the Paris agreement.

SCIENTIFIC PROGRAM

The conference will be organized around themes and "Grand Challenges" that integrate across different reservoirs, ecosystems and disciplines. The overarching goal is to elucidate how human activities, including fossil fuel emissions and land use, influence the coupled carbon-climate system.

For an overview see: www.icdc10.ch > program > themes

REGISTRATION

Abstract submission and registration will open in September 2016.
